

ABSTRACT

A pull tab (1) is adapted to extract an electrical connector (2) from a mating electrical device. The electrical connector includes a mating portion (20) and a retaining portion (21). The pull tab includes an engaging portion (11) and a handling portion (12). The engaging portion has a bottom section (110) and a top section (111). The bottom section has an engaging hole (114) adapted for engaging with the mating portion of the electrical connector. The handling portion extends from the top section for receiving an extracting force for extracting the electrical connector from the mating electrical device.
